

Cleveland Potash, Boulby UK

Vacancy – Plant Metallurgist.

Cleveland Potash are seeking a candidate to complement the team at Boulby Mine and fill the roll of plant metallurgist. You must have a degree in metallurgical/chemical engineering or equivalent. Experience in the processing of bulk ore would prove an advantage. Computer literacy is vital with you being proficient in Microsoft Office. You should demonstrate effective communication skills and be a motivated individual who can work as a member of a team as well as individually as required. Commitment to working according to the company's health and safety policy is vital.

The role of plant metallurgist includes, but is not limited to, the following duties:

- Compiling reports on plant performance on a daily, weekly and monthly basis.
- Ensuring efficient operation of the plant as well as consistent quality of the product by monitoring the process variables within each section.
- Initiating and assisting in research and development projects from conception to implementation.
- Undertaking laboratory tests, analysis and pilot plant test work to support proposed process changes.
- Monitoring and developing product recovery process control systems.
- Developing process simulation scenarios using simulation software.
- Offer support to the process and engineering team on site.

Written applications giving full particulars of education and experience should be forwarded to the HR Manager at Cleveland Potash.

Mr. John Rowley.
